The liquidity ratio*) and traded volumes of the government securities in lei issued on the internal market November 2018 - November 2019

The most tradable government securities issued on domestic market in November 2019

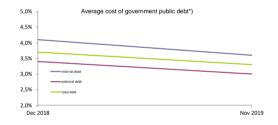

*) the liquidity ratio is calculated as ratio between the total volume of monthly transactions and the total volume of the government securities

IV. Cost of the government public debt

Interest payments on government public debt*)

| RON mil. | 2019 |
|---------------|----------|
| domestic debt | 6.283,6 |
| external debt | 5.232,6 |
| total | 11.516,1 |

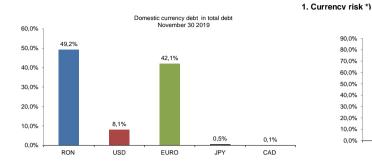

*) includes payments on direct and guaranteed debt for October 2019

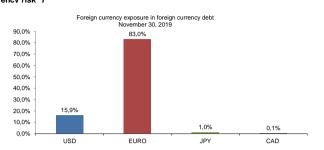

*) does not include interest for temporary financing. It was calculated dividing annually interest payments by stock at the end of November 2019

V. Implementation of DMS on medium term

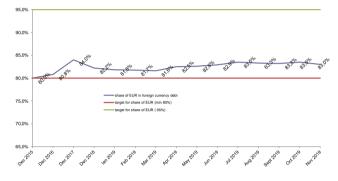

The revised Government Debt Management Strategy for the period 2019-2021 was approved by the Government in September 2019, proposing indicative targets for managing the financial risks associated with the government debt portfolio. On the medium term, risk indicators fall within the indicative targets of the Strategy. According to the Strategy, the limit mentioned as minimum or maximum cannot be exceeded during the period covered by the strategy (hard bound), while the other limit represents the limit to which it is stretched and which can be exceeded (soft bound).
